Adaptive Weaving

Continuous Growth

Just as the Weaver bird carefully selects every blade of grass to build a home, URI helps every learner select the right pieces of information to build their mind.

The Living Mind Metaphor

URI's visual identity reflects clarity, continuous pathing, and organic knowledge expansion—balancing natural warmth with intelligent technological precision.

Color Palette

OATMEAL	SLATE INDIGO	TERRACOTTA	SAGE GREEN	DUSTY OCHRE	EARTHY ROSE
#F5F0E1	#2D3250	#D17A5D	#4A7C59	#C5A059	#B27B7B

To address sensory overstimulation and accessibility for ADHD and Autistic users, the URI color system was calibrated into a "Low-Arousal" Palette. We maintain warmth while ensuring a safe, high-contrast environment for all ages that transitions from high-vibrancy tones to grounded, earthy shades respecting neurodivergent sensory needs.

OATMEAL	The Primary Foundation Canvas. A muted cream to reduce "white-screen glare" and visual stress.
SLATE INDIGO	Text & Stability: Used as Anchor for all long-form body text to ensure good contrast.
TERRACOTTA	Used for buttons and rewards without being overstimulating.
SAGE GREEN	A grounding color for ADHD focus, used to categorize quizzes or specific subject tracks.
DUSTY OCHRE	Used for parent/adult reports and diagnostic insights to feel professional yet warm.
EARTHY ROSE	A soft, non-alarming shade for "emergency" grounding exercises or the help menu.

Brand Guidelines

Color Palette Usage

The Typography Rule: Only Slate Indigo text is permitted on the Oatmeal background for body content to guarantee maximum legibility.

The Button Rule: UI elements using Terracotta, Sage, or Ochre should use Slate Indigo text labels rather than white to maintain high contrast for the visually sensitive.

Zero-Vibration Standard: Never place Terracotta elements directly against Sage Green backgrounds, as similar color values can cause "blurring" or sensory discomfort.

Saturation Cap: All background UI panels must use a 10-15% opacity version of these colors to prevent the "neon" effect that leads to user distraction.

Strategic Focus: Kids & Adults

For Kids: The interface utilizes the full 6-color spectrum for Visual Scaffolding, helping them color-code their subjects and navigate the "Discovery Journey" through playful categorization.

For Adults: The experience leans heavily into Slate Indigo and Oatmeal for a sophisticated, journal-like aesthetic, using Sage Green and Ochre only as subtle progress markers.

Logo Design

for URI

Brand Guidelines

Logo type

The URI logo uses a combination of mascot and word-mark logotype. The mascot central to URI's identity will often be used as a standalone icon (pictorial mark), especially for the mobile app icon.

The Weaver bird, also termed 'The Master Learner', is used. Weaver birds are famous for the complex nests, which young birds must learn to build through trial and error.

The URI logotype is a custom-designed wordmark that serves as the brand's anchor. We utilize a bespoke weight of Atkinson Hyperlegible.

The letterforms feature rounded terminals and open loops. This reduces visual crowding, making the name itself an example of the accessibility the platform provides.

Logo Components

Mascot Logo

Primary Logo Element Secondary Logo Element

Wordmark Logo

URI

The Weaver Bird (Primary logo element): The permanent, structural symbol of URI. It must be present in every application to ensure brand recognition.

The Spark (Secondary element): An elective storytelling element. It represents the 'Eureka!' moment and is reserved for high impact story telling (Splash Screens, Website Heroes, Print Cover, Landing Page, Marketing Posters). The spark may be used behind the Weaver Bird to establish the 'Aha!' moment.

SAFETY WARNING: To protect users with sensory processing sensitivities, the 'Spark' element must never be used at sizes smaller than 200px. At small scales, the fine lines of the flame create noise (vibration) that can be overstimulating and reduce legibility.

Brand Guidelines

In Tight Places

Use the Weaver bird and Wordmark only. The Spark is removed to prioritize clean navigation and hierarchy.

Usage: UI Headers, Dashboard & Profile Page.

URI

Mascot only. The spark is strictly prohibited at this scale to avoid visual vibration and ensure accessibility for special users.

Usage: Home Screen Icon, Favicon & Notifications

Brand Guidelines

Logo Style guide

To ensure the URI brand remains accessible and professional, the logo must be placed consistently to help special users build a "mental map" of the interface. Here is the placement guide using the desaturated, sensory-safe mascot.

Sensory-Safe Spacing (Clear Space)

To prevent visual clutter, which can be distracting for ADHD users, maintain a clear space around the logo equal to the width of the "U" in URI.

Minimum Clear Space: No other UI elements (text, buttons, or icons) should enter this zone.

Background Rule: Never place the logo on a patterned or highly saturated background; use Oatmeal or Slate Indigo (white-out version) for maximum stability.

Sizing & Legibility Guidelines

Digital Minimum: The wordmark should never be smaller than 80px wide to ensure Atkinson Hyperlegible characters remain distinct for those with visual processing needs.

Icon Minimum: The Weaver Bird mascot head should be at least 32px x 32px for clear recognition on mobile screens.

Brand Guidelines

Logo Style guide

Prohibited Usage (The "Don'ts")

❌ Do Not use the high-saturation original orange as a background for the logo; it causes visual vibration.

❌ Do Not tilt or distort the mascot; neurodivergent users benefit from predictable, upright shapes.

❌ Do Not place the logo over complex photography; always use a solid color to prioritize readability.

❌ Do Not add 3D drop shadows, glow effects, or decorative gradients to the wordmark.

Brand Guidelines

Logo Style guide (Spark/Fire backdrop Usage)

The Spark (or Fire backdrop) is a secondary, conceptual graphic element reserved for high-impact storytelling rather than daily functional use. The spark is used when the goal is to establish the brand's narrative, the 'Eureka!' moment of discovery.

App Launch/Splash Screens: It serves as a warm, welcoming visual that introduces the brand story as the app loads.

Website Hero Sections: In function spaces, the Spark is removed to reduce cognitive & visual clutter.

Marketing & Print Materials: For posters, covers or banners where the logo is displayed at a large scale, the Spark provides a sophisticated aesthetic backdrop.

Brand Guidelines

Standalone Mascot (Brand Personality)

The Weaver Bird mascot is the emotional heart of the brand. Using it as a standalone pictorial mark transforms it from just a logo to a companion & independent guide. The weaver bird mascot is **authorised to appear of the formal logo and without the Spark backdrop to act as a supportive "Tutor" or "guide" for the user.** This helps the users feel they have a consistent companion throughout their learning journey.

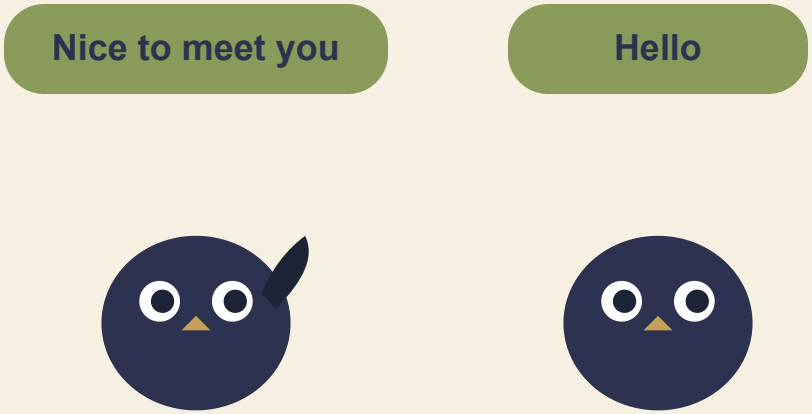

Authorized Standalone Use Cases:

- **App Icon:** The mascot head serves as the primary "home screen" anchor for instant recognition.
- **Interactive Tutoring:** The mascot can appear within lessons to provide feedback (e.g., a "thumbs up" or "keep going" animation).
- **Progress Rewards:** The bird can be used at the end of a subject track to celebrate milestones.
- **Gamification (Avatars):** Users can interact with the mascot as a profile icon or a "guide" through the platform's "Discovery Journey".

Brand Guidelines

Standalone Mascot (Brand Personality)

Brand Guidelines

Standalone Mascot Guideline

Guidelines for Standalone Placement

- **Consistency Anchor:** When used as a navigational element (like a "Home" button), the mascot head must be placed in a consistent location to help users with ADHD and Autism build a reliable "mental map" of the app.
- **Sensory-Safe Environment:** The standalone bird must always appear on a solid Oatmeal or 10-15% opacity background panel to prevent visual distraction and "white-screen glare".
- **Zero-Vibration Rule:** Do not place the colored mascot directly against high-vibrancy or clashing backgrounds (e.g., Terracotta bird on a Sage Green background) as this causes sensory blurring.

Distinction from the "Storytelling Spark": As established, the "Spark/Fire" backdrop is strictly for Storytelling (Splash screens). In all functional uses, the mascot must appear without the backdrop to prioritize clear, high-contrast, and undistorted recognition.

Brand Guidelines

Standalone Mascot Guideline

Purpose of Standalone Use

- **Empathetic Play:** The bird acts as a tutor, celebrating wins and providing grounding support during difficult tasks.
- **Cognitive Anchoring:** A consistent mascot character helps Autistic users build a "mental map" of the interface, knowing that where the bird appears, help or progress is found.

Key Use Cases

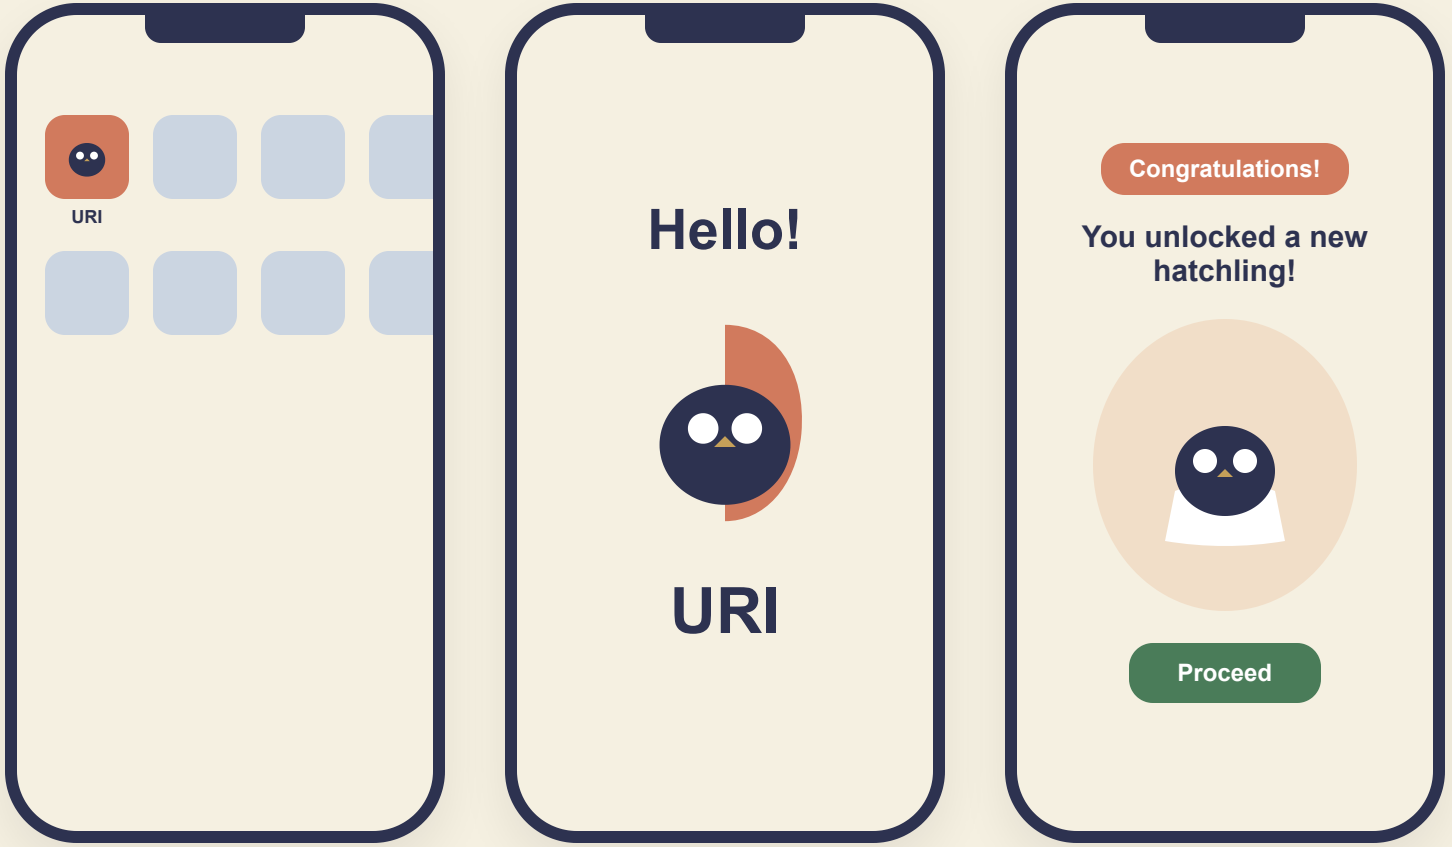

- **App Icon:** The mascot head is the primary "handshake" on the mobile home screen.
- **In-Lesson Guidance:** The bird can appear as a "floating" element to give instructions or encouragement.
- **Profile/Home Button:** A simplified version of the bird head serves as the "Home" or "User Profile" icon in the navigation bar.

Brand Guidelines

Standalone Mascot Guideline

Critical Rules for Standalone Usage

- **The "No-Spark" Policy:** To ensure maximum recognizability and reduce visual noise, the Spark/Fire backdrop is strictly prohibited in standalone functional uses.
- **Background Stability:** The standalone bird must always sit on a solid Oatmeal or 10% opacity color panel. Never place it on patterns or high-saturation colors.
- **High-Contrast Clarity:** The bird's features (eyes and beak) must remain high-contrast (Slate Indigo on Oatmeal) to ensure it is "glanceable" for special users.
